# Automated SAP System Maintenance

An end-to-end SAP Maintenance Service at Fixed Cost

The family of systems from SAP AG automates work within and across businesses, eliminating tedious information processing tasks and enabling a totally new level of operational effectiveness.

Because the SAP systems record hundreds of business events and provide information for dozens of decisions every day they have to be **100% reliable**, which includes the possibility of employees to use the systems every time they need them, with the speed that fits the users' work rhythm, while calculations need to be 100% accurate and not a single bit of information can be lost.

These high criteria for reliability for SAP systems can only be met if the systems are kept in excellent "health" all the time, which requires adjusting various elements of the systems as data volumes grow, organisations evolve, legislation changes and new versions of the software become available. Collectively the activities needed to keep the systems in shape to meet the needs of the business are known as: "**System Maintenance**".

With "Automated SAP Systems Maintenance" Forability provides a radically improved way to ensure the health of SAP Systems.

Our approach relies on use of proprietary technology to collect data about performance of the SAP systems and the underlying computing infrastructure 24x7 that enables us to be extremely effective leading to a new level of service quality and reduced cost for the customer.

We are among the few providers in our industry to be able to offer low '**fixed-cost**' **SAP Maintenance** independent of the resource work effort we may need.
